KOROYD

Koroyd® is a next generation energy absorbing technology, engineered with a unique structure which reduces trauma levels with innovative energy management properties. When impacted, the Koroyd® cores crush homogeneously, decelerating the impact energy and can help reduce final trauma levels.

ULTRA VISION WITH TRANSITIONS®

See the path ahead clearly through optically correct face-shield technology, coupled with an industry leading field-of-vision and a Transitions® lens that seamlessly adapts to changing light, from clear in low light and dark in bright sunlight, and every shade in between.

ENGINEERED AEROACOUSTICS

Focus on the road ahead and fully engage with the ride thanks to KLIM's perfected aeroacoustic performance. Combining sleek and stable aerodynamics, adjustable ventilation ports and a premium liner system, KLIM makes it easy to keep riding mile after mile.

TESTED, TESTED, TESTED, TESTED

To perfect the premium ride quality of the KRIOS PRO, ADV test riders revised and manipulated every component in the real-world to ensure features such as visors and modular systems didn't increase noise or reduce on-bike comfort. The result: aeroacoustic and aerodynamic excellence and high-level fit and finish ensure a premium experience on every ride.

LAYERING

CLIMATE CONTROL

As a powerports enthusiast, you have the capacity to easily get into unpredictable conditions. The gear protecting your body isn't just clothing, it's equipment. KLIM engineers this equipment to function as a system in various conditions through heavy abuse.

The basic principle is controlling the microclimate around your body. Staying warm in the cold, and staying cool in the heat is best accomplished with effective layering.

BASE LAYER

This layer wicks moisture from your skin and promotes evaporation. Base layers are designed to protect you from excess moisture in cold weather and enhance cooling in hot weather.

MID LAYER

Designed as controllable insulation, mid layers retain heat and are easy to add or remove as physical exertion and temperature requires. Like base layers, proper mid layers need to be wool or synthetic material.

OUTER LAYER

The main defense against exterior weather forces is the outer layer – your main riding gear. This layer needs to provide waterproofness and breathability to maintain a comfortable microclimate, all while protecting from regular abuse.

You don't control the weather. You control your ride.

* PLEASE DRINK Sarsaparilla RESPONSIBLY. RIDE SAFE!
